

Ask. Find. **Act.**

Documents, databases, emails, web sources. BraianOS queries them all in real time with AI. It finds the answer, then runs the procedure for you. Operative in your business, only after your approval.

BOOK A FREE DEMO

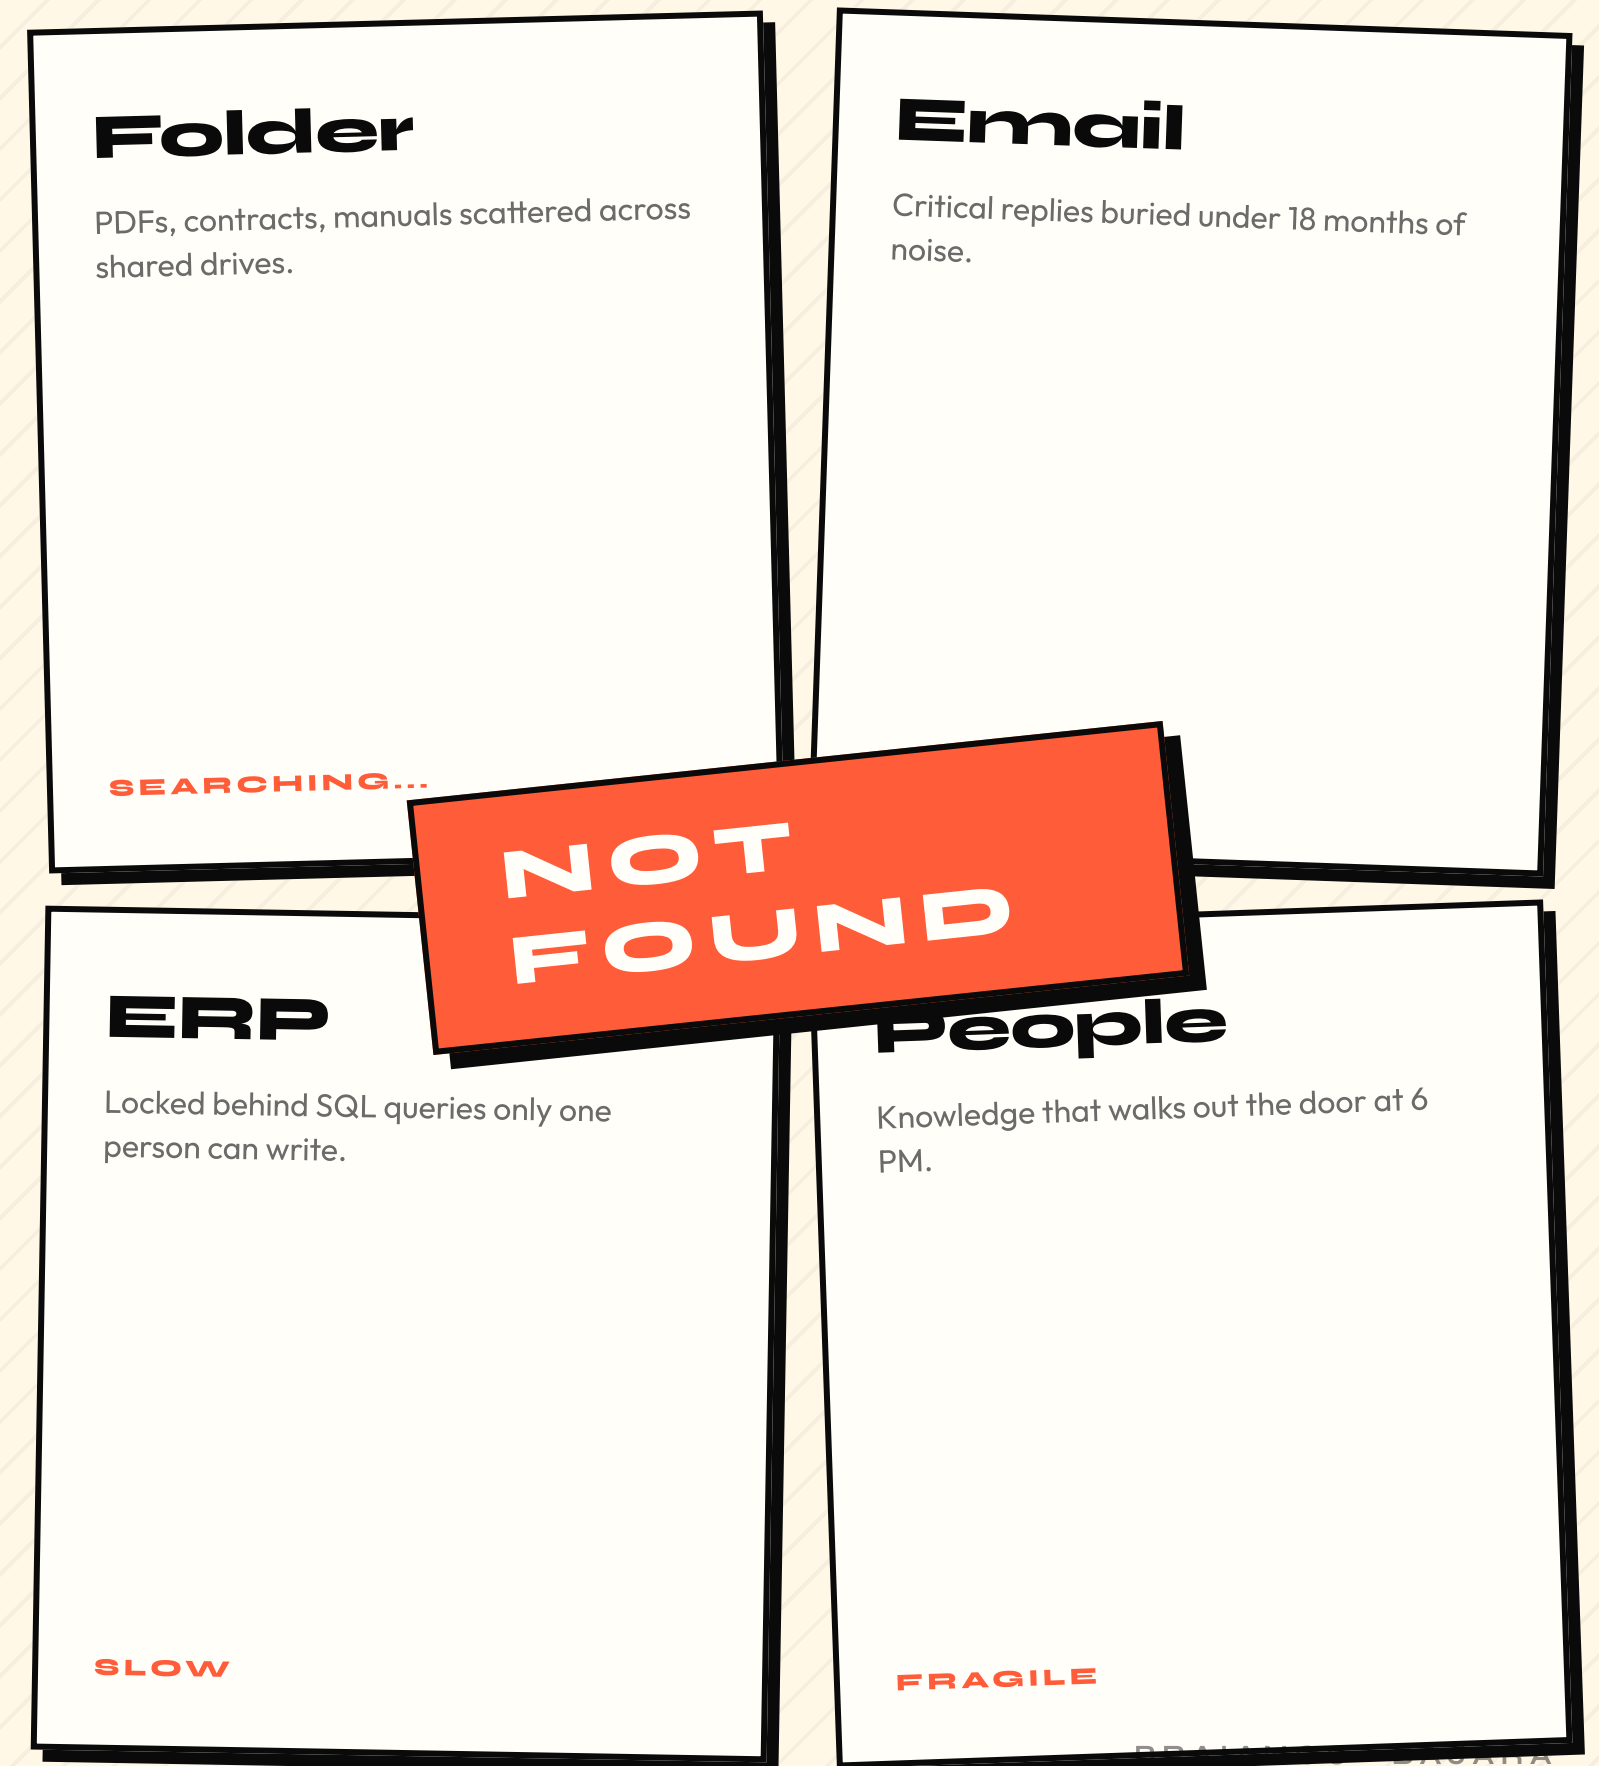

30 minutes to understand the potential. No commitment.

The information is there. *Finding it* is the problem.

Spec sheets in one folder, emails in another, data in the ERP, procedures in someone's head. Every day your team wastes hours searching for information that already exists. Somewhere.

The result? Slow decisions, avoidable errors, company knowledge that depends on people instead of systems.

One **single place** to ask your company anything.

BraianOS connects your documents, databases, and data sources into a single platform you can query in natural language. No SQL queries, no manual searches. Ask a question like you would ask a colleague, and get the answer with the exact source. And when an answer calls for action, BraianOS can run the procedure for you, only after your approval.

ASK What's our Q3 revenue across all divisions? ■

GET ANSWER

From question to action in four steps.

No setup gymnastics. No SQL training. Plug in your sources, ask in plain language, approve the action, let BraianOS run it.

STEP 01

01 Connect

Upload documents or consult your databases. BraianOS integrates with your existing sources without changing anything, unless instructed otherwise.

STEP 02

02 Ask

Ask a question in plain language, like you would out loud. "What's the procedure for claim X?" or "How much did we invoice client Y in Q3?"

STEP 03

03 Approve

BraianOS returns the exact answer with its source and, when an action is needed, proposes the procedure to run. You review and approve. Nothing executes without your go-ahead.

STEP 04

04 Act

Once approved, BraianOS runs the workflow: it sends, updates, generates, or files. Operative in your business, with every step logged.

NOW OPERATIVE

It doesn't just answer. It *acts*, with your approval.

- 1 Find the answer**
BraianOS searches your sources and returns the precise answer, with citations.
- 2 Propose the action**
Based on the answer, it proposes the right procedure: the workflow to run, step by step.
- 3 You approve**
Nothing happens until you say yes. Human-in-the-loop approval is built in, auditable, and required by design.
- 4 It executes**
Once approved, BraianOS runs the workflow end to end and confirms what it did, every step logged.

 Human-in-the-loop by design: **every operative action requires your explicit approval.**

1 Draft renewal email

2 Update CRM record

3 Notify account manager

AWAITING YOUR APPROVAL

APPROVE

DONE · OPERATIVE

Everything you need. Nothing you don't.

Six capabilities, one platform. Built for companies that already have data, just not the way to query it.

Document Search

Find anything in seconds.

Upload PDFs, Word docs, manuals, procedures. BraianOS reads, understands, and makes them queryable. Search by meaning, not by filename.

Conversational AI

Ask plain. Get answers.

Ask questions like you would ask an expert colleague. BraianOS responds with precise information drawn from your documents and databases, always citing the source.

Database Connection

Your databases finally speak.

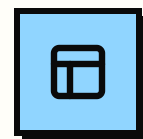

MySQL, SQL Server, PostgreSQL. BraianOS connects to your databases and queries them in natural language. No queries, no manual exports.

Enterprise Security

Your data never leaves.

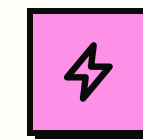

Role-based access, document-level permissions, encrypted sessions, audit log. Every company gets a dedicated instance. Nothing shared.

Custom Dashboards

Data that matters, at a glance.

Drag-and-drop widgets: statistics, charts, tables. Real-time data from any connected source, automatically updated.

Actions & Workflows

It doesn't just answer. It acts.

Beyond search and reports, BraianOS triggers configurable procedures in the areas it's trained for: sending, updating, generating, filing. Always with human-in-the-loop approval, every action logged.

Built for those with too much information and too little time.

MANUFACTURING

Spec sheets, audits, machine manuals.

Spec sheets, certifications, quality procedures. All queryable from a single point. Prepare an audit in minutes, not days.

PROFESSIONAL FIRMS

Cases, regulations, billable minutes.

Thousands of cases, regulations, client documents. Every minute spent searching is a minute not billed. BraianOS gives it back to you.

HEALTHCARE & PHARMA

Protocols, reports, regulatory clarity.

Protocols, reports, regulatory compliance. When a mistake can be costly, the right answer at the right time is not a luxury.

SMES · MULTI-SITE

One memory across every location.

When information is distributed across locations, departments, and different people, BraianOS becomes the company's single memory, accessible to everyone.

YOUR DATA · YOUR RULES

Your data stays *yours.* Period.

Unlike generic SaaS where your data ends up in a shared database with thousands of other companies, BraianOS runs on an instance entirely dedicated to you.

Cloud managed by us, or installation on your own servers. Either way, no one else has access. Ever.

Dedicated instance

One environment per client. No shared databases, no cross-tenant leaks.

On-premise option

Install on your own servers. Data never leaves your infrastructure.

Data in Italy

Hosted by an Italian team, in Italian data centers. Latency where it matters.

GDPR by design

Encrypted sessions, audit logs, role-based access. Compliance baked in.

From answer to action.

Let's see it together.

In 30 minutes we'll show you how BraianOS finds answers and runs approved actions on your specific case. If it makes sense, we proceed. If not, you'll still understand what's possible.
